Alice Adams decides to create an account at CopMonkey for (some or all of) her needs around data-sharing relationship management. CopMonkey could choose to accept OpenIDs; the identity scheme doesn't matter for our purposes.
Default Policies

- No default policies; ask me when a data recipient connects the first time.

- Use these default contract terms and other policies:

  **Policy Commons contract type:**
  - Strict 1.3
  - Medium 1.1
  - Loose 1.1
  - Commercial 1.1

  **Data feed management:**
  - One-time sharing
  - Repeated sharing over time:
    - Number of times: 6
    - Ending on date: 2009-12-31

  Informal definitions
  Legal definitions

CopMonkey leverages a (hypothetical) set of standard data-sharing contracts, but any web resource containing contract terms, ideally "machine-, human-, and lawyer-readable" like Creative Commons is, could work.

Later, when Alice goes to her online calendaring service...
Currently you have no relationship manager set up.

Select your relationship manager for calendar-sharing protection:

Other: https://www.myblog.com/protect  Sign up  Help!

Alice already has an account under the username AAdams, and logs in to introduce Schedewl to CopMonkey. (Again, the identity scheme doesn't matter.)

Alice could self-host an RM, e.g. on her own blog as she has begun to type here, but ultimately she has chosen the CopMonkey icon.

Thanks to these sources for logos:
- http://www.flickr.com/photos/hendry/2069263047/
- http://www.flickr.com/photos/splat/105050162/
Alice is redirected to her RM to log in, to begin the process of introducing CopMonkey and Schedewl. (This process uses classic OAuth.)
Schedewl is asking to sign up with CopMonkey to have it protect resources residing there. Allow?

- Cancel
- Confirm

CopMonkey does not know, or need to know, the username on Schedewl; security is through browser redirect.

What does it mean to authorize a service provider?
Configuring CopMonkey policies for data-sharing
Revoking service provider authorization
Welcome, Alice.

Alice is redirected back to Schedewl to continue whatever she was doing there; she can change or drop her RM choice at any time.
Later, when Alice visits her credit card website...
Let us know your travel details to help us fight fraud

If you travel frequently and are concerned about unauthorized charges or the inconvenience of having legitimate travel charges denied, then letting us see your travel details will help us serve you better and make you safer from fraud. 3rd National promises to keep your data safe.

Supply your travel calendar address:

http://www.schedewl.com/calendar/ical/.../public/travel.ics

Alice need not even be logged in when offering to share data, but she could be - and again, any identity scheme could be used.

Alice’s process of filling in this calendar address is identical to what she would do today to share (e.g.) her Google calendar with an individual person. Her RM could help her build feeds that link to sets of data sourced from anywhere, and share those feed URLs.

The use cases for permissioned sharing between any two parties are endless. See other materials explaining ProtectServe for more.
Hi, Alice!

Contract terms and other data-sharing policies for this data recipient:

Select a data recipient:

<table>
<thead>
<tr>
<th>Data Recipient</th>
</tr>
</thead>
<tbody>
<tr>
<td>3rd National VISA</td>
</tr>
<tr>
<td>Giggles Dental</td>
</tr>
<tr>
<td>BooksOnline4You</td>
</tr>
</tbody>
</table>

At her leisure, or the first time 3rd National VISA tries to access a protected resource on Schedewl or elsewhere, Alice can refine her policies for that data recipient.

Policy Commons contract type:
- Strict 1.3
- Medium 1.1
- Loose 1.1
- Commercial 1.1
